

Upsee

Therapy Programme

A parent's guide to choosing activities for improving Mobility, Ability & Participation (MAP)

fireflyfriends.com

Contents

SECTION 1

INTRODUCTION TO UPSEE

LET'S GET READY

With your Upsee, you can begin to provide different opportunities for developing your child's mobility, ability & participation skills using our Upsee Therapy Programme.

Of course, you can choose to simply place your child in the Upsee and move around – many families love to do this. However, the longest lasting benefits are gained by taking things a little more slowly. Letting your child take their own weight and allowing them to make the movements themselves means that they are actively learning and developing.

In this booklet, we provide you with help and guidance from our qualified Physical and Occupational Therapists to support you to get the most out of your Upsee.

What is the Upsee?

The Upsee is a mobility device designed to allow children with movement delays to stand and move with the help of an adult.

It was invented by Debby Elnatan, a special needs mum from Israel, whose son has cerebral palsy. Many years ago, Debby was told by health professionals that her son had no awareness of his legs. Shocked by this, Debby tried to walk him by herself - a difficult task which led to her idea for the Upsee. She searched for a company to make her product and chose Firefly by Leckey.

Firefly is a division of Leckey (www.leckey.com), a company known worldwide for making postural equipment for children with special needs. However, Firefly's unique focus is **special needs family participation**, which provides a perfect match for the Upsee.

The Upsee went viral online when it was launched and the response from families was amazing. Encouraged by this, we continued to listen carefully to what families had to say about the Upsee. That's why our expert Physical and Occupational Therapists devised the Upsee Therapy Programme - to promote the use of the Upsee for therapy as well as family participation.

Watch Debby tell her own story on YouTube: bit.ly/debby-elnatan

Before you start

Before attempting to use the Upsee for therapy or family participation activities, you must be able to answer 'yes' to ALL THREE questions below:

- Does your child already use a standing or walking frame?
(Is your child already in a standing or walking programme?)

- When standing, are your child's shoulders below your navel/belly-button? (Your child's height in relation to you is important for safety)

- Can you and your child both stand upright while using the Upsee? (Make sure your body shape doesn't alter your child's posture)

If you answered 'no' to even one of these questions, the Upsee is not suitable for your child.

We also don't recommend the Upsee if:

- Your child has very tight muscles
- Your child has a medical condition where they might need laid down quickly for treatment (for example, seizures)
- Your child has had more than one broken leg bone (due to brittle bones, for example)
- Your child's hips and knees are fixed in a bent position
- Your child has major postural differences between the left and right sides of their body
- You are expecting a baby
- You have or have had lower back pain

If you have any doubts about your child's suitability for the Upsee, it's best to check with your therapist, or you can contact us using our details at the end of this booklet.

For more assessment and prescription information, check out our 'useful downloads' section at www.Fireflyfriends.Com/therapists/product-guide/upsee

Putting on and taking off your Upsee

Once you are sure the Upsee is suitable for your child, you are ready to get going!

Getting used to putting on and taking off your Upsee can take a bit of practice, so please take the time to read the information in the Upsee User Manual and watch the instructional videos online at www.fireflyfriends.com/upsee Make sure your child is wearing comfortable clothing, trousers and footwear before putting them in the Upsee, and if they usually wear ankle splints (AFOs) for weight bearing activities, these should be put on too.

Remember that if you or your child experiences any discomfort when using the Upsee, stop immediately. If the discomfort continues, contact your doctor.

Parents, there is a video available for you to watch at bit.ly/upsee-assessment-prescription

SECTION 2

THE UPSEE THERAPY PROGRAMME

Did you know?

The map model is based on the World Health Organisation's ICF-CY framework. Turn to the Resource section at the back for more info.

What is the Upsee Therapy Programme?

The Upsee Therapy Programme provides a series of carefully selected activities which can contribute to your child's development.

There are three key areas of the programme:

Mobility (M), Ability (A) & Participation (P).

This is the map:

- **MOBILITY (M)**

is your child's ability to access their world and gain as much independence as possible;

- **ABILITY (A)**

refers to all aspects of your child's physical, cognitive and social development;

- **PARTICIPATION (P)**

is about enabling your child to experience as many activities as possible.

The Upsee Therapy Programme consists of the MAP Mobility Assessment, and the MAP Activity Programme to work on mobility, ability and participation.

As the Upsee is primarily a mobility device, the MAP Mobility Assessment is the starting point of the Upsee Therapy Programme. There are also activity suggestions for ability and participation depending on what stage your child is currently at, and details on how to review and record your progress.

Overview of the Upsee Therapy Programme

Your Upsee arrives!

Find your child's mobility **starting point** using the **map mobility assessment**

Choose **mobility, ability & participation** activities to work on using the **map activities worksheet**

Record progress using the **map mobility assessment** and optional **map abilities assessment**

Repeat at regular intervals, for example once per month

Read the instructions and practice using the Upsee

Remember to record your child's stage and goals

Don't overdo it! Try to practice activities little and often

Finding your child's mobility starting point

Using the MAP Mobility Assessment

It is important to understand your child's current stage as well as their limitations, because this helps you figure out what stage to work on next.

Your child's mobility starting point is simply what your child is able to do at this moment in time, both in the Upsee and out of the Upsee. You know your child better than anyone, so along with the MAP Mobility Assessment (and your therapist if possible) you will be able to work out their starting point. Remember that all children are different and your child's starting point may not be the same as that of other children.

Our MAP Mobility Assessment (see resources) helps you to decide your child's mobility starting point in the Upsee. It contains three Mobility Goals and the stages designed to help your child progress as much as they are able.

The three mobility goals are:

Head
Control

Weight
Bearing

Walking

The stages of each Mobility Goal are a bit like building blocks, each one supporting the next. For example, for weight bearing, the stages build from no weight bearing to consistently weight bearing:

STAGES		DATE
 <p>MOBILITY GOAL 2: WEIGHT BEARING</p>		
STAGE 1	No weight bearing	
STAGE 2	Flickers of weight bearing	
STAGE 3	Weight bearing continuously for 5-30 seconds	
STAGE 4	Weight bearing continuously for more than 30 seconds but less than 2 minutes	
STAGE 5	Maintains symmetrical weight bearing through legs	

To decide which stage your child is currently at in each of the three Mobility Goals, use the Upsee for a couple of short sessions to judge their response. Remember you can refer to the Upsee User Manual, online instructional videos and the guidance notes on the MAP Mobility Assessment to help you.

Then, use the MAP Mobility Assessment to identify which stage most closely matches your child's activity in the Upsee for each Mobility Goal, and record the date.

Additional blank mobility assessment sheets are available in the 'Useful Downloads' section at www.fireflyfriends.com/therapists/product-guide/upsee

These may be useful for therapists who would prefer to create alternative mobility goals for your child.

Once you know what your child can currently do in the Upsee for each Mobility Goal, you can choose to aim for the next stage or maintain the stage your child is currently at. To use the weight bearing example again, if your child shows flickers of weight bearing while in the Upsee (their current stage is STAGE 2 – shaded **RED** on the example), you can work towards weight bearing continuously for up to 30 seconds (STAGE 3 – shaded **BLUE** in the example).

STAGES		DATE
	MOBILITY GOAL 2: WEIGHT BEARING	
STAGE 1	No weight bearing	
STAGE 2	Flickers of weight bearing	10.02.17
STAGE 3	Weight bearing continuously for 5-30 seconds	
STAGE 4	Weight bearing continuously for more than 30 seconds but less than 2 minutes	
STAGE 5	Maintains symmetrical weight bearing through legs	

Did you know?

The right equipment and therapy that encourages mobility has been shown to prevent or slow down secondary deformities.¹

Choosing ability and participation activities using the MAP Activities Programme

Now that you have found your child's Mobility starting point for each of the three Mobility Goals, find the worksheet for that goal in the resources section. There are five worksheets in total, but you will probably never work on more than three at any one time, depending on the stage your child is at.

The mobility suggestions on each worksheet are designed specifically to work on that goal, so if you are working on weight bearing, the mobility suggestions will help with weight bearing. However, lots of the ability and participation activity suggestions can be mixed and matched. You will find therapy tips on each worksheet, as well as a list of general 'top tips' in the resource section.

These will help you to get the most out of your Upsee Therapy Programme.

Lists of mobility, ability and participation activities are included in the resource section. Don't be afraid to choose ones that work best for your child and family participation. If you are unsure about which activities to choose, it's best if you speak to your therapist. You can also contact us using the contact details provided on the back page.

Did you know?

Evidence suggests that providing family-centred care can improve a child's development and decrease parental stress 2,3

Remember!

Progress in the Upsee will vary a great deal from child to child – some going much faster than others. It depends on many things, including their underlying health condition and how regularly you use the Upsee.

Your child will benefit from the experience of standing with you, which may be the best they can do at this stage in their development.

For some children, maintaining a stage is an achievement in itself.

Don't be tempted to exaggerate or over-estimate the stage your child is at, even if they are close to the next stage. Be realistic, and then you can be sure that when progress occurs, it's the real deal.

If things aren't going to plan don't lose heart! Keep a record of the stage your child is at and take a break, or go back to an easier stage if you need to.

Read about other families' Upsee stories at:

www.fireflyfriends.com/therapists/case-histories/upsee

How to review your progress

It's useful to try to review your child's progress because it:

- Helps you understand any effects that the Upsee may have on your child's development;
- Keeps you focused on encouraging your child to achieve the next stage;
- Helps you look back and remember how far your child has come, especially if you take photographs and/or videos as you go along.

How to review your progress using the MAP Mobility Assessment and optional MAP Ability Assessment

As the Upsee concentrates primarily on mobility, you can use the MAP Mobility Assessment to review your child's progress. After about a month, simply repeat the process of assessment and check how your child is doing against the stages for each goal.

If your child has reached a new stage, write the date beside it. You are then aiming for the next stage, as you did before. If your child hasn't quite reached the next stage, don't worry, just keep going and review again in another month, or whenever you feel she has made progress.

Optional MAP Ability Assessment

Some parents have reported unexpected changes in their child's abilities (for example, hand function or confidence), which they believe are related to using the Upsee. If you notice additional changes, try to capture these using the MAP Abilities Assessment (see resources). This will help to give you a much more rounded picture of your child's

progress. Simply choose whether you feel your child's skills in the six ability areas (hand function, floor play, communication, attention, exploration and fun) are (a) worse than before you started using the Upsee; (b) the same as before; or (c) better than before. Make a note of any specific changes you have noticed, and try to describe what is different.

Sharing your progress with us at Firefly

We'd love to hear how you and your child are getting on with your Upsee Therapy Programme, especially if you've completed one or two reviews. Going by the stories we have heard from families through Facebook and Twitter, we believe that the Upsee can benefit children in a number of ways. However, it's really difficult to show this because families share their stories in so many different ways.

The Upsee Therapy Programme provides families, not only with a therapy tool, but a system for recording progress, which means we can compare stories. And if we can show patterns, we can more reliably demonstrate the benefits of the Upsee to families and their therapists.

So, if you'd like to be part of this bigger picture, please email your reviews to **upsee.programme@fireflyfriends.com**

Top Tips

- Choose a time when your child is well rested and ready for play for your Upsee session. After eating, try to wait at least 30 minutes before using the Upsee, and avoid using it before bed.
- Stand for a short time (around 2 minutes) to begin with and increase the time in the Upsee gradually, going at your child's pace.
- Use a mirror to check that the Upsee is fitting both you and your child correctly and to review your progress, e.g. regarding posture, head control, trunk control, etc.
- Encourage your child to initiate their own steps and/or the direction of movement.
- Try to make the experience fun for everyone involved – include brothers, sisters, friends and use toys, music or everyday tasks (e.g. getting something from the fridge) to encourage your child in the Upsee.
- Keep an eye on your child's confidence before and after using the Upsee and note how much your child is enjoying the Upsee session.
- Note how much your child is motivated to use the Upsee before using it, and how much your child is motivated to do activities in the Upsee.
- Take photographs and videos as you go along, remembering to note the date – they form a really helpful part of your review.

SECTION 3

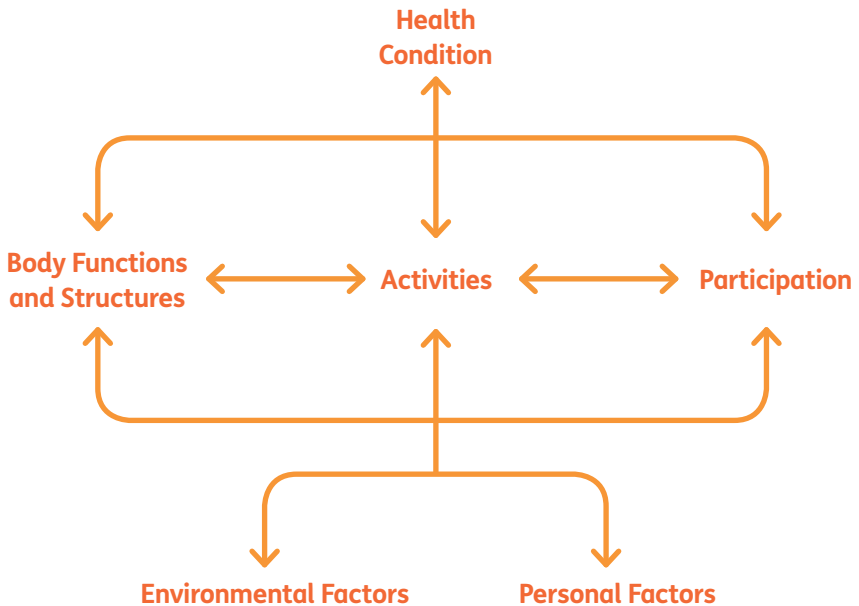

RESOURCES

ICF-CY and Map explained

The International Classification of Functioning, Disability and Health for Children and Youth (ICF-CY) is an internationally recognised framework which is designed “to record the characteristics of the developing child and the influence of its surrounding environment.” (World Health Organisation, 2007).

This means that health and functioning are emphasised, and disability or difficulties with function are viewed simply as part of the overall health spectrum. The focus is balanced between what children and young people are able to do, as well what they have difficulty with. The overall model is below:

International Classification of Functioning, Disability and Health Framework for Children and Youth (WHO, 2007).

ICF-CY and Map explained

The **health condition** is generally considered the child's diagnosis – this could equally be 'asthma' or 'cerebral palsy'. **Body structures and functions** relate to the health condition and describe what is wrong with the body. This may be wheezing (for asthma), or high muscle tone (for cerebral palsy).

The body functions and structures affect the child's **activity**. Does the child become short of breath? Can the child rise to stand and walk? What is the child capable of doing?

Activity impacts on the child's level of **participation** in everyday activities such as playing, eating, dressing, cycling, going to the shops, involvement in sports etc.

Alongside these factors is the acknowledgement that the child's **environment** and individual **personal factors** influence their development. Parents, siblings, motivation, cognitive ability, housing, infrastructure of local health and education services, and access to sports and leisure facilities are a few of the environmental and personal factors that may impact on a child's development in each area.

Research suggests that therapy which looks at multiple areas appears to be more beneficial than a single treatment approach. Therefore, interventions should target body functions and structures, activities and participation, as well as environmental and personal factors (Chiarello & Kolobe, 2006).

Firefly

At Firefly by Leckey, our vision is to create a world where every child with special needs can enjoy a childhood filled with play, participation and possibilities.

Working with the community of parents and therapists we will campaign for change and co-create unique, innovative, life changing products.

We recognise that we are not able to change a child's health condition or environment, but by using Firefly products, we believe we can have an influence on their body structures, activities and participation. So, we have developed our own MAP framework to reflect where we can help.

The MAP

The MAP is Firefly and Leckey's own framework for understanding how products can help children with disabilities. With the child, their family and the products at the centre of the model, their developmental progress is influenced by mobility, ability and participation.

For example, by using a product to stretch muscles (body functions and structures in the ICF-CY), we may actually improve **mobility** which we define as a child being able to access their world and gain as much independence as possible. And of course, products which move will encourage mobility too!

A product might encourage a child to develop hand function, concentration or communication (activities in the ICF-CY). We have termed this **ability**, which we define as improving physical, cognitive and social development.

Similarly to the ICF-CY, we have defined **participation** as being able to experience as many activities as possible.

Therapy terms explained

Gross motor skills

Large movements usually related to developmental milestones e.g. rolling, sitting, crawling, cruising and walking.

Reach

Part of gross motor skills, stretching arms to reach across the body, upwards or downwards.

Fine motor skills

Small movements usually related to hand function e.g. pincer grasp, ability to hold a crayon, manage cutlery, or buttons etc.

Bilateral hand function

Part of fine motor skills using both hands together to hold, throw, catch, build, open etc.

Visual-motor skills

The ability to co-ordinate eyes and movements. Visual-motor skills affect the ability to kick a ball (eye-foot co-ordination), pick up a block (eye-hand co-ordination), or drink from a cup (hand-mouth co-ordination).

Body awareness

The ability to recognise body parts and know where they are in relation to other body parts or surroundings without having to look.

Confidence

Self-assured and willing to try new things.

Initiation

The ability to start a movement and/or the direction of movement.

Engagement

Obvious enjoyment from taking part in an activity.

Motivation

Eagerness to take part in an activity and responds positively. May become upset when it's time to finish.

Communication

The ability to listen and respond through facial expressions, gestures, sounds or words.

Getting prepared

Tracking (vision)

The ability to follow a stimulus using the eyes, with or without moving the head.

Everyday activities

Activities that people do on a day-to-day basis e.g. walking, brushing teeth, setting the table.

Sensory skills

The ability to process information (e.g. light/dark, hot/cold, rough/smooth, noisy/quiet) using the senses to understand the world and carry out everyday activities more easily.

Choose a time when both of you have time so you don't have to rush. Put on the Upsee according to the Upsee User Manual and online instructional videos.

Stand up slowly and adjust the Upsee straps as explained. You do not have to move at this stage. Simply stand and watch your child's reaction for the three mobility goals. You may find it better to have a couple of trials in the Upsee to reduce the chance of having an 'off day' in the Upsee.

Assessing for Mobility Goal 1: Head Control

Give your child a moment or two to get used to the Upsee. If their head control is poor, watch what happens when you stand up in the Upsee. Does their head hang down, even with encouragement from you or exciting toys held out in front? If so, select Head Control Stage 1. You will be aiming for Head Control Stage 2.

Does your child try to lift their head, even just a little, with your encouragement before it falls down again? If so, you can select Head Control Stage 2 and your goal is Head Control Stage 3.

If your child is able to hold their head upright for a short time, count how long they can do this for. You will then select Head Control Stage 3 or Head Control Stage 4 and be aiming for Head Control Stage 4 or Head Control Stage 5.

If your child has full head control, you can select Head Control Stage 5 and this will be the stage which you maintain for your child.

Assessing for Mobility Goal 2: Weight Bearing

Give your child a moment or two to get used to the Upsee. Stand in the Upsee and sway a little from side to side. You will be able to feel if your child is hanging in the harness (Weight Bearing Stage 1) or bearing weight through their own feet (Weight Bearing Stage 2 - Stage 5).

Only select Weight Bearing Stage 5 if your child is able to take the same amount of weight through each leg, and this is the stage which you will maintain for this goal.

Assessing for Mobility Goal 3: Walking Pattern

Give your child a moment or two to get used to the Upsee. Begin to take a few small steps with your child. Move slowly and remember to modify your own step height and length to match your child's movement (see the Upsee User Manual and online instructional videos).

Walking Pattern 3a: Full help from adult

If your child refuses to move, or clearly dislikes walking in the Upsee, select Walking Pattern 3a Stage 1 and try just standing, to allow your child to get used to the Upsee harness. If your child needs your help through the whole walking movement, select Walking Pattern Stage 2 – Stage 5, depending on how much they can do. If your child is able to manage Walking Pattern 3a Stage 5, you are aiming for Walking Pattern 3b Stage 1.

Walking Pattern 3b: Full help from adult

This means that you will be able to feel whether your child takes over the stepping movement once you start. Select Walking Pattern 3b Stage 2 - Stage 5 as appropriate. If your child manages Walking Pattern 3b Stage 5, you are aiming for Walking Pattern 3c Stage 1.

Walking Pattern 3c: Without sandals

If you feel your child wants to take the lead in stepping, take the sandals off and see how they get on. Select the appropriate stage and aim for the next one. Walking Pattern 3c Stage 5 is the maintenance stage for this goal.

MAP Mobility Assessment

We would love to hear about your progress - send your reviews, photos and videos to:

@fireflyfriends.com

*see p50 for specific guidance

Your child's name:

Date of birth:

Diagnosis:

Date of assessment/review:

STAGES		DATE
 <p>MOBILITY GOAL 1: HEAD CONTROL</p>		
STAGE 1	Not able to lift head	
STAGE 2	Lifts head but unable to achieve upright position over body	
STAGE 3	Able to lift head to upright position for 5-30 seconds	
STAGE 4	Holds head in upright position for more than 30 seconds but less than 2 minutes	
STAGE 5	Maintains head in upright position	

STAGES		DATE
 <p>MOBILITY GOAL 2: WEIGHT BEARING</p>		
STAGE 1	No weight bearing	
STAGE 2	Flickers of weight bearing	
STAGE 3	Weight bearing continuously for 5-30 seconds	
STAGE 4	Weight bearing continuously for more than 30 seconds but less than 2 minutes	
STAGE 5	Maintains symmetrical weight bearing through legs	

STAGES

DATE

**MOBILITY GOAL 3:
WALKING PATTERN WITH FULL HELP FROM ADULT**

STAGE 1	Not able to take any steps with full help
STAGE 2	Can take 5–10 steps with full help
STAGE 3	Can take 11–20 steps with full help
STAGE 4	Can take 21–50 steps with full help
STAGE 5	Maintains stepping pattern with full help

STAGES

DATE

**MOBILITY GOAL 4:
WALKING PATTERN WITH SOME HELP FROM ADULT**

STAGE 1	Not able to take any steps with some help
STAGE 2	Can take 5–10 steps with some help
STAGE 3	Can take 11–20 steps with some help
STAGE 4	Can take 21–50 steps with some help
STAGE 5	Maintains stepping pattern with some help

STAGES

DATE

**MOBILITY GOAL 5:
WALKING PATTERN WITHOUT SANDALS**

STAGE 1	Unable to achieve any steps without sandals
STAGE 2	Can take 5–10 steps without sandals
STAGE 3	Can take 11–20 steps without sandals
STAGE 4	Can take 21–50 steps without sandals
STAGE 5	Maintains stepping pattern without sandals

MAP Activity Programme work sheet for:

Head Control

The specific head control stage we are working on is:

M

Mobility Activities

- Use your hands to move your child's head up slowly and gently, hold for a few seconds, and lower your child's head slowly and gently.
- Give some support to your child's shoulders from the front to encourage active movement.
- Keep your hold light and feel for any active movement your child makes towards head lift.

A

Ability Activities

- You can adapt most ability activities for working on head control by changing their height. Use your imagination to lift things up to eye level!
- Place magnetic shapes on the fridge door.
- Draw or paint at an easel.
- Put cutlery into a kitchen drawer.

P

Participation Activities

- As head control improves, you can do more difficult things.
- Stand in front of a long mirror, and sing action songs.
- Look out of a tall window.
- Play turn-taking games with a sibling or friend, for example, Pin the Tail on the Donkey, or piñata.

See activity suggestions in the following pages to choose other ability and participation activities for your child.

In general, leg and trunk activity promote head lift.

Choose ability & participation activities which encourage your child to look up.

MAP Activity Programme

work sheet for:

Weight Bearing

The specific head control stage we are working on is:

M

Mobility Activities

- Start in a standing position facing a mirror.
- Stand and sway slowly from side to side, giving your child the chance to be active; build this and encourage your child to reach in all directions.
- If your child bears weight through one leg more than another, lean and encourage them to reach more to the side which bears less weight or place the foot which normally bears more weight onto a low step.

See activity suggestions in the following pages to choose other ability and participation activities for your child.

A

Ability Activities

- You can adapt most ability activities for working on weight bearing by changing them to standing activities. Use play to encourage your child to shift their weight from side to side.
- Stand at a table to play, watch television or use an iPad, rather than sit.
- Play with sand, water or paint.
- Kick a balloon or ball.

In general, active weight bearing through the legs regulates muscle tone. Encourage both feet to be flat and wear AFos.

P

Participation Activities

- As weight bearing improves, you can do more difficult things.
- Play shopkeeper with a friend.
- Play throw and catch with a balloon or ball.
- Dance to slow tempo music.

As weight bearing improves, loosen shoulder straps a little (about 1cm/0.5") to encourage trunk balance.

MAP Activity Programme work sheet for:

Walking Pattern (with full help)

The specific walking pattern stage we are working on is:

Mobility Activities

- Try one step very slowly to let your child feel the movement. Then try a second step with the other foot. Step forwards and back with one leg, then the other. Step sideways and back with one leg, then the other.
- Place one foot on a very low step in front of the other foot. Rock backwards and forwards over your legs.
- As you build tolerance, try to make sure your child's step length is even for left and right legs.

Ability Activities

- You can adapt most walking activities by changing the location and duration of your walk. Use short steps with your feet slightly apart. You need to take smaller, wider steps than usual to go at your child's pace.
- Set the table.
- Play hide and seek.

Participation Activities

- As walking with full help improves, you can do more difficult things.
- Cook or bake together.
- Walk through fallen leaves.
- Dance to up tempo music.

M

A

P

See activity suggestions in the following pages to choose other ability and participation activities for your child.

It may take a while for your child to get used to moving in the Upsee. Don't overdo it or let them get too tired.

Encourage your child to look for toys and objects in different directions.

MAP Activity Programme work sheet for:

Walking Pattern (with some help)

The specific walking pattern stage we are working on is:

Mobility Activities

- Wait and feel for your child initiating stepping in different directions and go with them when this happens. This will improve motivation and a sense of purpose in stepping for your child.
- Try counting or using rhymes to keep a steady rhythm.

M

See activity suggestions in the following pages to choose other ability and participation activities for your child.

Ability Activities

- You can adapt most walking activities by changing the location and duration of your walk.
- Play football using a balloon or ball.
- Help to tidy up.
- Blow bubbles and chase them.

A

It may take a while for your child to get used to moving in the Upsee. Don't overdo it or let them get too tired.

Participation Activities

- As walking with some help improves, you can do more difficult things.
- Help with the gardening.
- Go for a walk on the beach.
- Help to wash the car.

P

Encourage your child to use their head or hands to point to show the direction they want to go.

MAP Activity Programme work sheet for:

Walking Pattern (without sandals)

The specific walking pattern stage we are working on is:

Mobility Activities

- If your child has shown the ability to take well placed steps with the sandals on, try walking without sandals.
- Guide your child's foot position to achieve a normal foot placement.
- Give your child time to initiate stepping and movement forwards, backwards and sideways.

M

Ability Activities

- You can adapt most walking activities by changing the location and duration of your walk.
- Dressing up.
- Play skittles or bowling.
- Play mini golf.

A

Participation Activities

- As walking without sandals improves, you can do more difficult things.
- Walk down a gentle slope.
- Take the dog for a walk.
- Paddle in the sea or paddling pool.

P

See activity suggestions in the following pages to choose other ability and participation activities for your child.

Avoid rushing your child and don't step before they are ready to go – wait for their active involvement.

Play involves making choices, and using the Upsee should enable your child to access their choices.

upsee

Ability Activity Suggestions

ACTIVITY SUGGESTIONS	GROSS MOTOR SKILLS	REACH	FINE MOTOR SKILLS
BALL PLAY	●	●	
BRUSH TEETH/HAIR		●	●
BUILDING BLOCKS		●	●
CHOOSE CLOTHES			
CLAPPING HANDS TO SONG/CLAPPING GAMES	●

Hand function Reaching, grasping, moving objects from hand to hand, using both hands together, feeding self or drinking.				
Floor play Sitting balance, attempts to move around on floor, ability to move around on floor.				
Communication Levels of understanding vocalising to show moods, use of words.				
Attention Concentration on activities, level of motivation or confidence.				
Exploration Levels of interest in people, surroundings, messy play, sensory activities with noise, lights or touch.				
Fun Levels of happiness, enjoyment of others' company, engagement in activities, smiling.				

Sharing your progress with us

To make sure we have a really clear overview of the progress you have made using the Upsee Therapy Programme, it would be beneficial for us to receive:

- A photograph or scan of your completed initial Mobility Assessment Sheet and a further two reviews of it. This should cover a time period of a minimum of two months.
- Photographs or videos that demonstrate the progress you have made at each of these reviews (ideally a minimum of three).*
- A photograph or scan of one completed Ability Assessment Sheet.
- Photographs/videos that demonstrate the different ability exercises you have been working on (ideally a minimum of three).*

Send all of these to upsee.programme@fireflyfriends.com and one of the team will be in touch.

*We love reviewing your photos and video footage - to avoid blurriness and to make sure we can view them properly, please take them with a digital camera, or a camera phone that offers a high resolution of image/video quality.
